## INSTRUCTION MANUAL – HONEY CREAMER

### Description of the device

The honey creamer is suitable for the production of fine-creamy honey and for mixing different honeys.

The stirring of the honey is carried out with a double-winged mixing paddle. The drive motor of the paddle is mounted (fixed) on the lid of the container. To drain the honey, a closable drain valve is attached to the lower side of the container. The container, the mixing paddle and the valve are made of food approved stainless steel.

## Stiring the honey

After switching on, by selecting the option AUTOMATIC the paddle begins to rotate.

The paddle rotates for 15 minutes, then it stops and stand still for 45 minutes. Then again rotates for 15 minutes, after that it stops and stand still for 45 minutes. This process is repeated until the machine is turned off by moving the switch to OFF.

MANUAL – option is used for fast and short mixing. Use this option for a **maximum of 20 minutes**.

## Drain of the honey

To drain the honey, a closable valve is attached to the lower side of the container.

## Cleaning

For cleaning, the cover with the engine can be removed, after that the paddle can be taken out.

To clean the inner part of the container use hot water, then wipe dry with cloth.
